PROJECTS

Generative Gregorian Chant Web Application Built with HTML, CSS, JS & Python

2024

cpu-gregorian-chant.com

- Algorithmically generated medieval Gregorian plainsong using Markov processes in Python
- Designed original pixel art and used JS to create an interactive user experience
- Researched plainsong extensively to understand the music of Gregorian Chant and its cultural context

Original Wordpress Theme for Circlebox Company Blog (<https://blog.circlebox.com/>)

2022

- Built an original, fully dynamic Wordpress theme with PHP, HTML, and CSS
- Used creative visual design principles to craft a web experience reflective of the company mission

“Choose Your Own Adventure Game”

2022

- Programed a Linux terminal-based adventure game with C++
- Utilized object oriented design principles such as getters, setters, methods, inheritance, and encapsulation

WORK EXPERIENCE

Guitar Teacher

2022-Current

- Teach classical guitar, music skills, and music theory to musicians of various skill levels

Circlebox | Web Design/Developer Intern

Summer 2023

- Used PHP, HTML, and CSS to design and develop an original Wordpress theme

Locker Pro | Birmingham, AL

Summers 2016 – 2022

- Served as a locker specialist in schools across the Southeast repairing lockers and resetting unlock codes

Klingler's European Bakery & Cafe | Birmingham, AL

2016 – 2017

- Waited tables and served customers working with a diverse team
